BARBRBarbershop Scheduling and Grooming Business Growth Platform.

Tech Stack

FRONT ENDReact.js

Mobile Front EndReact Native

BACK ENDPython, Django

Date: 24 July, 2024 Solutions: Beauty & Wellness SaaS - Barbershop and Grooming Management

Barbr is a modern booking and business management platform designed for independent barbers and barbershop owners, helping them simplify scheduling and grow their client base. [View website](#)

Barbr helps grooming professionals streamline bookings, reduce no-shows, and strengthen client-barber relationships via a mobile app dashboard. Clients can schedule instantly with a personalized link, eliminating the need for calls or messages.

**The Challenge** Many independent barbers and small shop owners were still dependent on manual scheduling, DMs, or inconsistent booking apps to manage their appointments - leading to no-shows, missed opportunities, and a weak online presence and weak brand identity. This resulted in: No client retention Administrative tasks took time away from clients dealing Frequent and manual cancellations

**The Solution** We partnered with Barbr, to develop a state of the art progressive web application and mobile application that empowers barbers to take full control over their

clients, bookings, branding and business. Our work included: Barbr mobile application for seamless booking through personalized links Integrated reminders, waitlists, and no-show protection to save time Provided a single dashboard to manage scheduling, communication, and performance analytics

We built a mobile-first platform for barbers to manage bookings, branding, and clients—featuring reminders, waitlists, and performance tracking. To boost revenue, we added Smart Pricing™, no-show protection, and rebooking—maximizing bookings, earnings, and calendar efficiency. Barbr's dashboard gives barbers insights into clients, bookings, and revenue—helping you grow, make smarter decisions, and scale with confidence.

Date: 24 July, 2024 Healthcare Technology (Management & Patient Engagement)

Treat is an all-in-one patient engagement and practice management platform designed specifically for medical, dental, and optometry clinics. View website

Treat empowers clinics to seamlessly manage the entire patient journey—from booking to payment—all on a single platform. By enhancing patient communication, boosting treatment acceptance, and simplifying daily workflows, Treat helps clinics optimize performance and deliver exceptional care.

**The Challenge** Clinics often relied on fragmented systems—separate tools for bookings, reminders, payments, and communication—leading to inefficiency and errors. This resulted in: Clinics had to rely on multiple disjoint tools for booking, reminders, payments, and marketing. Lack of real-time insights. Patients faced issues in understanding the cost and accessing multiple payment options.

**The Solution** Treat solves this with a unified platform. From scheduling to reminders, follow-ups, and payments, clinics manage everything from one simple dashboard. Our work included: All-in-one platform to manage appointments, reminders, and payments. Integrated VOIP, SMS, and email reminders to boost patient engagement. Added multiple payment options and financing tools to boost acceptance. Designed a scalable, user-friendly dashboard to boost growth and efficiency.

Treat simplifies the patient journey with scheduling, follow-ups, payments, calls, SMS, and reminders—all in one seamless platform. To boost treatment acceptance, Treat offers flexible payment options like third-party financing and in-app card processing—helping patients access care while clinics speed up cash flow and reduce admin tasks. Treat delivers real-time analytics and a smart dashboard to track performance, re-engage patients, and drive long-term clinic growth.

Date: 24 July, 2024 Solutions: E-Commerce, Deep-linking

Merge is a mobile deep-linking specialized platform designed specifically for affiliate marketers, helping them significantly increase their affiliate earnings. [View website](#)

Merge ensures that Amazon links open directly in the Amazon app on mobile devices instead of a browser, leading to better conversion rates, higher commissions, and an improved user experience.

The Challenge Amazon affiliate marketers were losing a significant portion of their potential commission revenue because mobile users were being redirected to Amazon's mobile browser version instead of the native app. This resulted in: Lower conversion rates Increased bounce rates Reduced user engagement

The Solution We partnered with Merge to develop a mobile-first deep-linking platform that automatically routes Amazon links to open directly in the Amazon app, ensuring higher engagement and conversion. Our work included: A fully responsive web app to generate smart links GDPR-compliant, cookie-free analytics engine Secure campaign dashboard for performance tracking Seamless user onboarding with Google login integration

Built a centralized system to manage the full patient journey with VOIP, 2-way SMS, and reminders for better engagement. Included flexible payment options like financing and card processing to reduce barriers, boost revenue, and cut admin work. Clinics get real-time insights on trends and growth with a smart dashboard to automate re-engagement and optimize performance.

BACKENDNest.js, TypeScript

Cloud/InfraAWS (Hosting & Server)

DATABASEPostgreSQL

COMPLIANCEHIPAA-compliant architecture

Date: 24th Feb, 2026 Solutions: Behavioral Health, Mobile App Platform

Team Recovery Technologies is a white-labeled mobile app platform purpose-built for behavioral health programs to activate alumni communities, boost client retention, and drive new admissions through long-term engagement. [View website](#)

Team Recovery empowers behavioral health providers to stay connected with patients long after treatment ends, transforming alumni from passive graduates into active advocates and referral sources. By replacing manual outreach with a fully branded mobile experience, treatment centers can automate engagement, track recovery milestones, and demonstrate measurable outcomes, all from a single platform. To reduce relapse rates and boost admissions, Team Recovery offers robust alumni engagement tools including in-app messaging, event management, and personalized recovery content, helping programs foster community and long-term accountability. The platform integrates appointment scheduling, outcome reporting, and real-time analytics so staff can focus on care rather than coordination. Team Recovery delivers a complete

white-glove implementation experience, from custom branding and app store publishing to ongoing maintenance with Apple and Google, so treatment centers can launch a thriving alumni community without any technical overhead.

The Challenge Behavioral health and addiction treatment centers struggle to maintain meaningful engagement with alumni after program completion, leading to high relapse rates and low referral volumes. Centers rely on fragmented, manual outreach spreadsheets, phone calls, paper records with no unified system to track outcomes or re-engage patients at scale. Without measurable outcome data, it's difficult for programs to justify insurance reimbursements or demonstrate clinical effectiveness to stakeholders. Generic communication tools lack the HIPAA compliance and clinical context needed for sensitive behavioral health environments.

## The Solution

Team Recovery delivers a fully white-labeled mobile app, branded to each treatment center, enabling seamless alumni engagement through in-app messaging, appointment scheduling, and outcome tracking. A 23-point proven implementation process guides programs from onboarding to a fully active alumni community — in 90 days or less. The platform automates follow-ups, check-ins, and progress tracking, reducing administrative burden while keeping clients connected to their recovery journey. Built-in reporting tools provide insurers and stakeholders with clear, data-backed outcome metrics to support reimbursements and program credibility. HIPAA-compliant security ensures all sensitive client data is protected end-to-end.

## Key Offers for This Project
